EXPERIENCE

NINJIO — Remote (Los Angeles, CA)

2026 – Present

Full Stack Engineer

- Lead engineer on Ninjio Sensei AI, a generative-AI platform that turns a prompt or uploaded document into a fully narrated, interactive security course — delivered 95 tickets across a new 14K-line Django app (20 service modules, 36 migrations) and a 5K-line React/TypeScript authoring wizard, shipped to production in both US and EU regions.
- Architected the generation pipeline end to end: document text extraction, opt-in web-search enrichment, and slide synthesis on OpenAI with an Anthropic Claude fallback, composing decks from 19 layout templates with assessments grounded in the taught content.
- Integrated ElevenLabs text-to-speech for per-character narration with word-level caption synchronization, per-character voice tuning, randomized narrator pools, and in-app upload, recording, and trimming of custom audio.
- Shipped multi-format delivery — self-contained SCORM packages for external LMS platforms, standalone HTML, and MP4 video export rendered through headless Chromium on a dedicated Celery queue.
- Built Remix (localize a published module into any of 8 languages, edit in place, or fork to a new draft) plus per-customer branding, usage-token metering, and feature flags resolved through the tenant hierarchy under strict multi-tenant data isolation.
- Backed the platform with 985 automated tests and owned release engineering: production ECS deployments, CI guards on the migration graph, and root-cause diagnosis of cross-region deployment failures.

CLUBE CERTO — Belo Horizonte, MG

2025 – 2026

Full-Stack Developer

- Built and deployed 8+ RESTful microservices and 432+ Vue/React front-end components for a loyalty SaaS platform, architecting 281 database models across 32+ domain-driven feature modules.
- Integrated 5+ payment providers (Asaas, EFI, Vindi, GalaxPay) for PIX/Boleto transactions and external APIs for Firebase, telecom (IXC), and healthcare (Hinova).
- Developed 5 AWS SQS worker pipelines handling associate onboarding, lead management, WhatsApp messaging, and bulk Excel imports processing 50K+ rows.
- Implemented JWT auth with multi-role RBAC, Zod validation, real-time Socket.io, and an automated financial recovery system with multi-channel collection drivers.
- Translated Uber's H3 spatial indexing library from C to TypeScript and implemented multi-resolution hexagonal geolocation indexing with k-ring queries, achieving 2-10x faster establishment search performance.
- Built reusable front-end component systems including a 1,100-line dynamic AutoForm generator (16+ field types), enterprise DataTable, and real-time financial dashboards.

COMFORTLY TRAVEL

2025 – 2026

Software Engineer (Back-end)

- Built and maintained Node.js/Express REST APIs deployed on AWS EC2 with Docker containerization for a travel booking platform.
- Optimized PostgreSQL queries and indexing strategies, reducing API latency by 25% and improving data access speed by 30%.
- Implemented CI/CD pipelines with GitHub Actions, reducing deployment errors by 80% and enabling reliable continuous delivery.

UPWARDTECH

2024 – 2026

Software Engineer (Consultant)

- Designed and built Flask + PostgreSQL CRM APIs for client projects, delivering custom business logic and data modeling.
- Automated client onboarding workflows, reducing manual setup time by 40% through programmatic provisioning.
- Improved production observability and incident response with AWS CloudWatch monitoring, logging, and alerting.

UNITED STATES AIR FORCE

2017 – 2022

Logistics Specialist

- Processed and coordinated movement of 33,000+ tons of cargo across 5,000 airlift missions, sustaining supply chains to 24 nations and 70 forward locations; recognized as Group Team of the Quarter.
- Managed flightline ground operations for critical medical logistics, dispatching 27,000 blood products on 498 missions to 70 locations — directly supporting 272 lives saved.
- Led contingency operations during a 16-day logistics system outage, manually processing 2,000 tons across 199 aircraft — validated fallback procedures and contributed to Squadron's Wing Safety Award.
- Partnered with traffic management to audit and recover \$1.2M in equipment lost over 5 years, processing 21,000 assets for depot return.
- Coordinated short-notice strategic bomber forward deployment, certifying 140 cargo increments as airlift-ready within one week to support regional deterrence operations.

PROJECTS

AUTOMATED BILLING ENGINE Professional — Clube Certo

Automated multi-channel billing collection engine

- Built an automated collection system with rule-based triggers (D+3, D+7, etc.), CRON batch processing, and multi-channel delivery via pluggable email/WhatsApp/SMS drivers.
- Implemented email pixel tracking with unique UUIDs for open detection, rate-limited SMTP pooling (1 email/3s), and atomic transaction logging with retry on failure.
- Processed thousands of invoices hourly across companies with status filtering, amount ranges, weekend skipping, and a test mode for safe staging rollout.

NODE.JS MYSQL CRON SMTP WHATSAPP API STATE MACHINE

H3 GEOLOCATION SYSTEM Professional — Clube Certo

Hexagonal spatial indexing for high-performance geolocation queries

- Translated Uber's H3 spatial indexing library from C to JavaScript/TypeScript and implemented multi-resolution hexagonal indexing (~1.2km, ~460m, ~174m) with k-ring expansion queries for 2-10x faster establishment searches.
- Built Sequelize model hooks for automatic H3 cell calculation on address create/update, dual query builders (closest address vs. full multi-address), and migration scripts for zero-downtime backfill of existing records.

[VIEW SITE](#)

Enterprise admin dashboard with 432 components across 42 feature modules

- Built a 432-component Vue 3 + TypeScript admin dashboard with TanStack Query for data fetching, shadcn-vue component system, and dark mode support.
- Developed a dynamic AutoForm generator (1,100+ lines, 16+ field types) and enterprise DataTable (850+ lines) with pagination, sorting, sticky headers, and global filtering.
- Implemented role-based permission controls, financial dashboards with real-time metrics, and a feature-driven modular architecture with isolated routing per module.

A.L.F.R.E.D Personal — AI Assistant + REST API

[GITHUB](#)

[LIVE API](#)

All-Knowing Logical Facilitator for Reasoned Execution of Duties

- Built a FastAPI REST API (9 endpoints + WebSocket) with Pydantic validation and auto-generated OpenAPI docs, Dockerized and deployed on Railway. Three entry points (voice CLI, PySide6 GUI, HTTP API) sharing one Supabase backend.
- Implemented a RAG pipeline with Supabase + pgvector for semantic memory search (OpenAI embeddings), multi-provider LLM fallback chain (Claude 3.5 Sonnet → GPT-4o-mini → free tier), and persistent conversation history.
- Set up production infrastructure: GitHub Actions CI (ruff lint + pytest), Docker containerization, pinned dependencies, and 65+ unit tests with full mock coverage.

PYTHON FASTAPI DOCKER SUPABASE PGVECTOR CI/CD RAILWAY PYTEST

CHESS ENGINE + AI Personal — C++17 / SDL2 / WebAssembly

[GITHUB](#)

Chess engine with AI opponent using minimax search, alpha-beta pruning, and SDL2 GUI

- Built a chess AI with minimax + alpha-beta pruning, quiescence search to resolve capture sequences, and a killer move heuristic for faster pruning at depth 5.
- Implemented positional evaluation with king safety, pawn structure analysis (doubled/isolated/passed pawns), bishop pair bonuses, and piece-square tables.
- Developed an SDL2 graphical interface with click-to-move, move highlighting, piece slide animations, board flip animation, undo, and live scoreboard; compiled to WebAssembly via Emscripten with mobile-responsive canvas scaling.
