EXPERIENCE

CLUBE CERTO — Belo Horizonte, MG

2025 – Present

Full-Stack Developer

- Built and deployed 8+ RESTful microservices and 432+ Vue/React front-end components for a loyalty SaaS platform, architecting 281 database models across 32+ domain-driven feature modules.
- Integrated 5+ payment providers (Asaas, EFI, Vindi, GalaxPay) for PIX/Boleto transactions and external APIs for Firebase, telecom (IXC), and healthcare (Hinova).
- Developed 5 AWS SQS worker pipelines handling associate onboarding, lead management, WhatsApp messaging, and bulk Excel imports processing 50K+ rows.
- Implemented JWT auth with multi-role RBAC, Zod validation, real-time Socket.io, and an automated financial recovery system with multi-channel collection drivers.
- Built reusable front-end component systems including a 1,100-line dynamic AutoForm generator (16+ field types), enterprise DataTable, and real-time financial dashboards.

COMFORTLY TRAVEL

2025 – 2026

Software Engineer (Back-end)

- Built and maintained Node.js/Express REST APIs deployed on AWS EC2 with Docker containerization for a travel booking platform.
- Optimized PostgreSQL queries and indexing strategies, reducing API latency by 25% and improving data access speed by 30%.
- Implemented CI/CD pipelines with GitHub Actions, reducing deployment errors by 80% and enabling reliable continuous delivery.

UPWARDTECH

2024 – 2026

Software Engineer (Consultant)

- Designed and built Flask + PostgreSQL CRM APIs for client projects, delivering custom business logic and data modeling.
- Automated client onboarding workflows, reducing manual setup time by 40% through programmatic provisioning.
- Improved production observability and incident response with AWS CloudWatch monitoring, logging, and alerting.

UNITED STATES AIR FORCE

2017 – 2022

Logistics Specialist

- Supported 5,000+ airlift missions across 24 countries; automated inventory tracking with Python on Linux, managing 33,000+ tons of cargo.

PROJECTS

AUTOMATED BILLING ENGINE Professional — Clube Certo

Automated multi-channel billing collection engine

- Built an automated collection system with rule-based triggers (D+3, D+7, etc.), CRON batch processing, and multi-channel delivery via pluggable email/WhatsApp/SMS drivers.
- Implemented email pixel tracking with unique UUIDs for open detection, rate-limited SMTP pooling (1 email/3s), and atomic transaction logging with retry on failure.
- Processed thousands of invoices hourly across companies with status filtering, amount ranges, weekend skipping, and a test mode for safe staging rollout.

Professional — Clube Certo

Enterprise admin dashboard with 432 components across 42 feature modules

- Built a 432-component Vue 3 + TypeScript admin dashboard with TanStack Query for data fetching, shadcn-vue component system, and dark mode support.

- Developed a dynamic AutoForm generator (1,100+ lines, 16+ field types) and enterprise DataTable (850+ lines) with pagination, sorting, sticky headers, and global filtering.
- Implemented role-based permission controls, financial dashboards with real-time metrics, and a feature-driven modular architecture with isolated routing per module.

A.L.F.R.E.D [GITHUB](#) Personal — Voice-Enabled AI Assistant

All-Knowing Logical Facilitator for Reasoned Execution of Duties

- Engineered a voice-enabled desktop assistant with multi-provider LLM fallback (OpenAI, Claude), ElevenLabs TTS, and a PySide6 GUI featuring real-time waveform visualization and system dashboards.
- Implemented semantic memory via ChromaDB vector storage with OpenAI embeddings, plus Google Calendar, weather, file search, and system automation integrations.

PYTHON PYSIDE6 OPENAI API CHROMADB ELEVENLABS

CHESS ENGINE [GITHUB](#) Personal — C++17 Chess Engine

Full chess engine with move validation, game state management, and undo system

- Built a chess engine from scratch with complete move validation (castling, en passant, promotion), sliding piece ray-casting attack detection, and check/checkmate logic.
- Designed a move/undo system with full game state history tracking for search tree traversal, using algebraic notation parsing and 8x8 board representation.
